

Heart Disease Prediction App

Enter patient clinical parameters to assess the risk of heart disease using the trained K-Nearest Neighbors (KNN) machine learning model.

Patient Demographics & Vitals

Age (years)

62

Sex

Male

Resting Blood Pressure (mm Hg)

150

Serum Cholesterol (mg/dL)

280

Fasting Blood Sugar > 120 mg/dL

Yes (> 120 mg/dL)

Clinical & Exercise Tests

Chest Pain Type

Asymptomatic (ASY)

Resting Electrocardiogram (ECG)

ST-T Wave Abnormality (ST)

Maximum Heart Rate Achieved (bpm)

110

Exercise-Induced Angina

Yes

Oldpeak (ST Depression in mm)

2.50

ST Slope

Flat

Predict Heart Disease Risk

Prediction Result

High Risk: Heart Disease Detected

Heart Disease Probability

100.0%

The model suggests an elevated likelihood of heart disease.
