

Heart Disease Prediction App

Enter patient clinical parameters to assess the risk of heart disease using the trained K-Nearest Neighbors (KNN) machine learning model.

Patient Demographics & Vitals

Age (years)

35

Sex

Female

Resting Blood Pressure (mm Hg)

115

Serum Cholesterol (mg/dL)

180

Fasting Blood Sugar > 120 mg/dL

No (<= 120 mg/dL)

Clinical & Exercise Tests

Chest Pain Type

Atypical Angina (ATA)

Resting Electrocardiogram (ECG)

Normal

Maximum Heart Rate Achieved (bpm)

175

Exercise-Induced Angina

No

Oldpeak (ST Depression in mm)

0.00

ST Slope

Upsloping (Up)

Predict Heart Disease Risk

Prediction Result

Low Risk: Normal / Healthy

Heart Disease Probability

20.0%

The model suggests a low likelihood of heart disease.
